

The background of the entire image is a warm, orange-toned photograph of laboratory glassware. In the upper left, a glass dropper is shown with a single drop of liquid about to fall into one of several test tubes arranged in a row. The lighting is soft and focused, creating a professional and scientific atmosphere.

2022

Monthly **Hiring Demand** Change

▼ -19%

Top 3 Companies:

Largest **Monthly** Talent Demand Increase
Normalised versus employee no.

The background is a warm, orange-toned photograph of laboratory glassware. A glass pipette is positioned diagonally from the top left, with a single drop of liquid hanging from its tip. Below and to the right of the pipette, several glass test tubes are arranged in a row, some containing liquid. The entire scene is bathed in a soft, golden-orange light, creating a professional and scientific atmosphere.

Insight Report

EVOLUTION SEARCH PARTNERS

Aim

To measure, model and predict 'supply versus demand' of Biomanufacturing talent across the global **CMO**, **CGT** and **Pharma** sectors.

Research Partners

Evolution Search Partners; **University of Dundee**; **University College London (UCL)**

Purpose

To provide analytical strategic intelligence to industry leadership to allow future facing workforce planning, aligned to support capital expansion project decisions, recognising the value of human assets in the economic success of the firm.

The outcome data aims to allow specific planning, where required, on creative talent acquisition, specific to segments of biomanufacturing workflows

Short Term

There is evidence that the bioprocessing sector is experiencing operational and staffing problems directly related to an increase in activity and demand. All sectors are experiencing an increase in R&D, manufacturing & production, with a shifting of resources towards responding to the pandemic. Most bioprocessing-related industrial activities are considered 'essential' and continue largely unaffected in terms of operations and output, while many are planning to ramp-up R&D and manufacturing. While there are many near-term changes in onsite staff management, broader business plans are generally not affected in the near-term.

Specific to Biomanufacturing talent, CMO and Pharma companies can no longer wait to develop talent strategies. They already have job openings they cannot fill, and the gap is widening as megatrends disrupt and transform biomanufacturing. Adopting talent management programs and processes will help manufacturers attract and retain workers with the desired skill sets. This is a challenge that requires flexibility and insight. And the stakes are high. Manufacturers with an engaged and skilled workforce will be more likely to enjoy a successful and sustainable future.

Market Drivers

Spark Therapeutics to Invest \$575M in New 500k Square Foot State-of-the-Art Gene Therapy Innovation Center on Drexel's University City Campus

Notably, Sangamo Therapeutics actually ramped up its cash burn very hard and fast in the last year, by 109%, signifying heavy investment in the business.

Atara plans to use \$100 million in cash to fund its operations into late 2023. By then Atara plans to have finished its Phase 2 study of ATA188, a T-cell therapy designed to treat multiple sclerosis.

Predictive Talent Dynamics

Predictive Talent Market Dynamics

Various models presented below exemplify the ‘Supply versus Demand’ market growth assumptions:

USA Biomanufacturing Supply versus Demand modelling. Various market growth options. Talent Supply presented at 10% growth (median over 12 years); Talent Demand growth projected at 10% (left) and 20% (right) respectively. Intersecting lines illustrate where talent demand and supply are in equilibrium (Evolution, 2022). Supply refers to number of graduates and post-graduates entering Biomanufacturing industry; demand specific to Biomanufacturing job vacancies.
