Introduction and Methodology

Insight Report

Aim

To measure, model and predict 'supply versus demand' of Biomanufacturing talent across the global **CMO**, **CGT** and **Pharma** sectors.

Research Partners

Evolution Search Partners; **University of Dundee**; **University College London (UCL)**

Purpose

To provide analytical strategic intelligence to industry leadership to allow future facing workforce planning, aligned to support capital expansion project decisions, recognising the value of human assets in the economic success of the firm.

The outcome data aims to allow specific planning, where required, on creative talent acquisition, specific to segments of biomanufacturing workflows

Short Term

There is evidence that the bioprocessing sector is experiencing operational and staffing problems directly related to an increase in activity and demand. All sectors are experiencing an increase in R&D, manufacturing & production, with a shifting of resources towards responding to the pandemic. Most bioprocessing-related industrial activities are considered 'essential' and continue largely unaffected in terms of operations and output, while many are planning to ramp-up R&D and manufacturing. While there are many near-term changes in onsite staff management, broader business plans are generally not affected in the near-term.

Specific to Biomanufacturing talent, CMO and Pharma companies can no longer wait to develop talent strategies. They already have job openings they cannot fill, and the gap is widening as megatrends disrupt and transform biomanufacturing. Adopting talent management programs and processes will help manufacturers attract and retain workers with the desired skill sets. This is a challenge that requires flexibility and insight. And the stakes are high. Manufacturers with an engaged and skilled workforce will be more likely to enjoy a successful and sustainable future.

Long Term

A laboratory setting with a pipette and test tubes. The background is a warm, orange-yellow gradient. A pipette is shown in the upper left, dispensing a drop of liquid into one of several test tubes arranged in a row. The text is overlaid on a semi-transparent orange band across the middle of the image.

Market Drivers

- Regenxbio receives fda fast track designation for rgx-202, a novel gene therapy candidate for the treatment of duchenne muscular dystrophy
- Regenxbio opens gene therapy manufacturing facility at its Maryland HQ

- This has been a year [2022] marked by progress across our pipeline. In the third quarter, we continued to advance our clinical trials and preclinical activities
- Pfizer and Sangamo Therapeutics announce phase 3 trial of investigational gene therapy for hemophilia a has re-opened recruitment

- Expect cash runway into 2025, enabling multiple data readouts across platforms for lead programs, driven by significant cash savings from manufacturing facility move to Bothell, Washington as well as research prioritization

Predictive Talent Dynamics

Predictive Talent Market Dynamics

Various models presented below exemplify the 'Supply versus Demand' market growth assumptions:

USA Biomanufacturing Supply versus Demand modelling. Various market growth options. Talent Supply presented at 10% growth (median over 12 years); Talent Demand growth projected at 10% (left) and 20% (right) respectively. Intersecting lines illustrate where talent demand and supply are in equilibrium (Evolution, 2022). Supply refers to number of graduates and post-graduates entering Biomanufacturing industry; demand specific to Biomanufacturing job vacancies.
